### 1.6.1 REQUESTED SERVICES

The Services requested under this assignment are as follows:

#### 1.6.1.1 Project Goal and Objectives

The overall goal of the project is to enhance the climate resilience of targeted ecosystems within the Pointe Sable Environmental Protection Area (PSEPA) and Pigeon Island National Landmark (PINL) by strengthening the coastlines and improving the management and health of coastal ecosystems.

***The project has the following objectives:***

***Objective 1:*** To assess and improve the adaptive capacity and ecosystem value of the mangrove forest within the PSEPA and the coral reefs within the PSEPA and PINL regions;

**Objective 2:** To undertake studies and implement measures to reduce causes of degradation of coastal resources; and

**Objective 3:** To improve decision makers' and civil society's understanding of the role of ecosystems in reducing climate risks and to take appropriate action to promote healthy ecosystems.

#### **1.6.1.2 Background on the Site**

The PSEPA lies on the south-east coast of Saint Lucia, extending from Pointe de Caille in the north to Moule a Chique in the south. It is a narrow coastal strip comprising 1,038 hectares of terrestrial and marine space with a seaward boundary extending to a 20 m depth contour line.

The PSEPA was established by the Government of Saint Lucia in 2007 'for the purpose of protecting the natural beauty or interest in the area'. It is a complex of ecosystems and resources which play vital roles in maintaining the natural integrity of the area and sustaining the livelihoods of communities in the southern part of the island (especially Vieux-Fort). Ecosystems include coral reefs, mangroves (declared Ramsar sites), extensive seagrass beds, off-shore islands and tropical dry forest. The PSEPA also contains marine reserves, an artificial reef, and offshore sandbank, a Wildlife Reserve, historic/archaeological sites and visually appealing landscapes. Some endemic species of reptiles and amphibians are found within the PSEPA, particularly on Maria Island Major, the largest of the three off-shore islands.

The diverse ecological resources of the PSEPA sustain a variety of livelihoods including fishing, seamoss farming, charcoal production and tourism. It is a popular beach recreation site for nationals of and visitors to Saint Lucia.

The PSEPA is therefore an area of high ecological significance on the south-east coast of Saint Lucia. It has acquired international attention, recognition and funding and must therefore be maintained to ensure resilience to withstand present and potential threats posed by climate change and other naturally occurring events and hazards.

#### **1.6.1.3 Objective of this Consultancy**

The coastal areas of the PSEPA have been experiencing increased high wave action and erosion for some time now. It is well acknowledged that the rising sea level due to climate change is a major driver that accelerates erosion in coastal environments around the world. However, the influence of other factors such as extreme weather events, coastal hazards such as coastal recession, sand dune instability and geotechnical hazards must be taken into consideration. Poor land use and resource management practices within the target areas of the PSEPA, such as the removal of vegetative cover within near-shore coastal areas, sand mining and the movement of vehicles within the beach and sand dune areas, must be factored in as possible contributors to coastal damage within the PSEPA.

The Consultant will therefore be required to conduct studies to identify the causes of coastal degradation and design appropriate green-grey coastal stabilisation solutions/measures within the PSEPA so as to *inter alia*, reduce erosion and loss

of infrastructure, stabilize the shoreline, build resilience of recreational beaches and other identified assets, build adaptive capacity, enhance the naturalness and attractiveness of the beach environment, protect coastal and marine ecosystems and stabilize shoreline structures (natural or man-made). The desired outcomes of these solutions/measures are two-fold: (1) the increased protection, stability and resilience of recreational beaches and other assets within the PSEPA from coastal erosion; and (2) the improvement of climate resilience of the natural resources and ecosystems within the PSEPA from the utilization of the coastal stabilization measures.

#### **1.6.1.4 Component Output**

The outputs directly related to this component of the project are:

- a) Coastal Stabilisation Engineering analysis for the PSEPA coastline including the cause of the coastal erosion within the area and supporting engineering designs, drawings and systems for proposed green-grey solutions;
- b) Recommendations for green-grey coastal stabilisation interventions to reduce and remedy coastal degradation and protect coastal ecosystems and resources that support livelihoods;
- c) Technical specifications and costing for remedial recommendations;
- d) Rapid Environmental Impact Assessment based on recommended solutions.

#### **1.6.1.5 Methodology**

The consultant shall determine and present to the SLNT the most suitable methodology for undertaking the coastal stabilisation study in accordance with the objectives of this consultancy. Notwithstanding this, the consultant shall consider the following:

- a) Undertake desktop research to collect background data, for the PSEPA including:
  - i. PSEPA Management Plan
  - ii. Reports from studies, maps, aerial photos & satellite imagery and literature on the area;
- b) Conduct bathymetric survey, topographic survey of the shoreline, benthic survey and drogue tracking exercises;
- c) Sample sediment along shoreline – both the beach berm and foreshore;
- d) Sample the water for water quality analysis;
- e) Existing drainage and revetment survey;
- f) Operational data analysis, inclusive of grain size, current and water quality analysis;
- g) Erosion analysis, inclusive of storm surge prediction and hurricane erosion modelling;
- h) Wave climate modelling, hydrodynamic modelling and analysis of currents;
- i) Drainage analysis inclusive of drainage facility sizing, delineation of catchments and storm water flow analysis;

- j) Operational sediment transport analysis;
- k) Structural design of hard and soft coastal stabilisation options;
- l) Development of the construction methodology and cost estimate for each hard and soft option;
- m) Preparation of environmental impact screening statement;
- n) Preparation of engineering report including drawings and green-grey concepts.

### 1.6.1.6 Proposed Intervention

The consultant will be required to develop solutions to protect the shoreline from erosion and where feasible to rehabilitate eroded areas of the coastline. These may include but are not limited to engineering (hard and soft) design solutions/measures and green-grey infrastructure, such as (a) structures for wave control; (b) structures for controlling sediment movement; (c) control of beach deformation; and (d) management practices and tools for protecting and maintaining beach vegetation and ecosystems.

### 1.6.1.7 Work Site

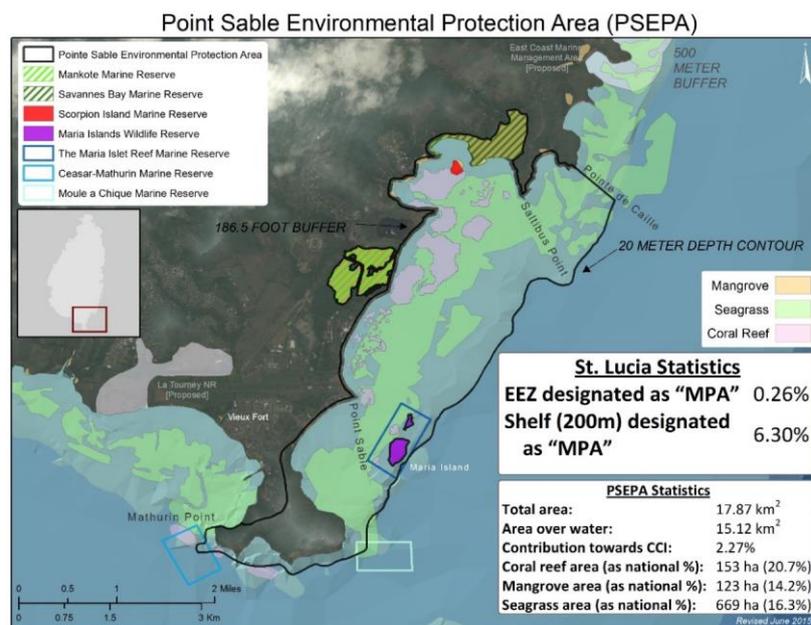

Figure 1: Map of PSEPA

### 1.6.1.8 Expected results

The coastal stabilization solutions/measures to be implemented in the PSEPA are expected to improve the resilience of the coastal and near shore marine and coastal resources from climate change impacts and naturally occurring events. These solutions/measures would contribute to the improved adaptive capacity of local communities and enhanced institutional frameworks to address climate change impacts on the coastal environment and ecosystems. The appropriateness and effectiveness of the solutions/measures are critical in optimising strategic and sustainable actions that best manage the risks from coastal erosion and climate change adaptation in the PSEPA.

### 1.6.1.9 Scope of Work

This assignment requires an understanding of the complex hydrodynamic processes occurring in the near shore zone of the PSEPA and subsequently recommend reliable, functional, environmentally friendly and economically feasible engineering design solutions/measures to address destructive changes and enhance constructive ones.

Some of the expected activities of the consultant include:

- a) Host an Inception Meeting with representatives of the SLNT. The meeting aims to acquaint the Consultant with the PSEPA and specify the zones of specific interest, clarify the Scope of Work and responsibilities of the Consultant, determine the support which will be provided to the Consultant by the various parties in the execution of this consultancy. The Inception Meeting will also establish communication protocols and the basis for obtaining/sharing information, obtaining feedback and finalising the methodology for the consultancy;
- b) Submit an inception report including a work plan and schedule of deliverables within two (2) weeks of the Inception Meeting with the SLNT to be shared with project partners;
- c) Conduct a review of all relevant existing studies and other documents pertaining to the PSEPA so as to analyse baseline physical, environmental (ecological) and social characteristics of the PSEPA and conceptualize the general project detail. These documents will be inclusive of those provided by the SLNT and the other partners;
- d) Provide a report of the literature reviewed;
- e) Undertake an assessment of the PSEPA to develop understanding of current conditions within the PSEPA, inclusive of the processes outline in the methodology above. The assessment should take into consideration the input of various stakeholders associated with the PSEPA. The assessment should identify/confirm natural and anthropogenic forces causing or contributing to erosion of the coastline and general destruction within the PSEPA.
- f) Design hard and/or soft green-grey coastal stabilization measures/solutions to protect the shoreline from erosion and where feasible to rehabilitate eroded areas of the coastline.
- g) Make a technical presentation on the major factors contributing to coastal erosion in the area and the proposed coastal stabilization solutions/measures to the SLNT, and other parties, to include, inter alia designs specifications, cost estimates, functionality, effectiveness and benefits of the proposed solutions. Presentation should be made after the approval of the draft report. The presentation should also identify potential environmental and social impacts that could arise from the implementation of the proposed coastal stabilization solutions/measures on the natural and built environment and the maintenance and monitoring actions that will be required for their long-term functionality and make recommendations that would address potential impacts. (Note: At this point it would be noted

these impacts are to be considered preliminary in nature pending a full EIA).
